Subject: Announcement: MSL1 Classification and Unlimited Shelf Life of Our Products

Dear Partners and Customers,

ECS goes by the JEDEC standard for shelf life, all ECS Inc., International products are MSL1, they would have unlimited shelf life when stored in proper conditions ≤30°C/85% RH.

What is MSL1?

MSL1 (Moisture Sensitivity Level 1) is a classification used in the electronics and semiconductor industries to describe the level of moisture sensitivity of electronic components. Components classified as MSL1 are considered to be the most robust and least sensitive to moisture. This means that they can be stored and handled in normal conditions without the risk of moisture-related damage or degradation. MSL1 components do not require special packaging or handling procedures to protect them from moisture, making them highly reliable and convenient for long-term storage and usage.

Unlimited Shelf Life

One of the key benefits of the MSL1 classification is that our products now come with an unlimited shelf life. This ensures that you can store our products for extended periods without any degradation in quality or performance. Whether you use our products immediately or keep them for future needs, you can be confident that they will maintain their integrity and effectiveness.

Commitment to Quality

At ECS Inc., International, we are committed to providing you with the best possible products. With our product being MSL1 classification, we believe this will provide you with greater flexibility and assurance in your use of our products.

Thank you for your continued trust and partnership. We look forward to serving your needs with our enhanced product line.
